INTRODUCTION

- **BloodLink is a location-based platform connecting hospitals, blood banks, donors and blood donation camps in one place.**
- **It helps hospitals find nearby suitable donors and helps donors receive requests and discover nearby donation camps.**
- **Goal: Make blood donation faster, easier and more accessible**

THE PROBLEM

The Challenge

- Finding the right blood group during an emergency can be time-consuming.
- Hospitals may struggle to reach suitable donors quickly.
- Potential donors often do not know when and where blood is required.
- Blood donation camps are distributed across different locations and may be difficult to discover.
- There is a lack of a single platform connecting donors, hospitals/blood banks and donation camps.

Key Problem

- The right donor may exist nearby, but the hospital may not know how to reach them quickly.

OUR SOLUTION

INTRODUCING BLOODLINK

- BloodLink creates a digital connection between:

DONOR

- Register blood group, location and availability.

HOSPITALS / BLOOD BANKS

- Post blood requirements with blood group, quantity, urgency and location.

DONATION CAMPS

- List upcoming camps, locations, dates and blood groups required.

BloodLink automatically:

- Matches → Locates → Notifies → Connects

HOW BLOODLINK WORKS

End-to-End Workflow

1. Donor Registration

Donor enters blood group, location and availability.

2. Hospital Posts Requirement

Hospital enters:

Blood group

Required quantity

Urgency

Location

3. Smart Matching

BloodLink identifies suitable available donors and prioritizes nearby donors.

4. Donor Notification

Matching donors receive an alert containing the requirement and approximate distance.

5. Donor Responds

“I Can Donate”

6. Hospital Receives Response

The hospital can view the donor response and proceed through its authorized medical/blood-bank process.

KEY FEATURES

What Makes BloodLink Useful?

- Emergency Requests — Hospitals can post urgent blood requirements.
- Smart Matching — Find and prioritize nearby suitable donors.
- Notifications — Alert matching donors about blood needs.
- Nearby Camps — Discover donation camps based on location.
- Dashboards — Separate dashboards for donors and hospitals.
- Request Tracking — Track requests from Open → Response → Fulfilled.

TRUST AND SECURITY

Building a Trusted Platform

- Verified Organizations — Verify hospitals and blood banks
- Donor Privacy — Protect personal and location details.
- Admin Control — Monitor and manage suspicious accounts.
- Secure Access — Role-based access for different users.

> BloodLink connects donors with healthcare organizations while keeping trust, privacy and safety at the center.

BUSINESS MODEL

How BloodLink Makes Money

- Donors — FREE
Registration, alerts & camp discovery.
- Hospitals & Blood Banks — Subscription
Advanced matching, notifications & analytics
- Camp Organizers — Service Fees
Camp registration & management.
- CSR Partnerships — Sponsorships
Companies sponsor blood donation drives.

THANK YOU
